proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering level of expression of a sugar transport protein in about cell, by transforming a host cell with a chimetic construct encoding all, or a portion of the sugar transport protein, in sense or antisense orientation. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ABX93206-ABX93211 represent cDNA sequences encoding Beta vulgaris-like sugar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GAGTCGCCGCGGTGGTCATGAAGGGACGCCTCGCGGACGCCAAGGTGGTGCTGGAG

The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynucleotide sequences can also be used to isolate present sequences that encode homologues of the new proteins. The present sequence contig assembled from various soybean cDNA clones encodes a Beta vulgaris-like sugar transport protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TATCAAACTATGCATTTTCGAAGCTGACACTAAAGGTGGGATGGCGAATGATGCTTGGAG 749

The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaris-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering the transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense orientation. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ARX93206-ABX93211 represent CDNA sequences encoding Beta vulgaris-like sugar
                                                                                                                                                                                                                                                                                                                                           transport proteins and nucleic acid encoding the producing transgenic plants having altered levels of

```

The present sequence encodes a polypeptide which is a transporter of a linear polyol. DNA encoding linear polyols is used to produce a selection system for transformed cells, based on the use of polyols as the only carbon source. It is also used to produce transgenic plants with increased resistance to pathogens and salt stress. The use of a linear polyol for selection eliminates the need for toxic selection reagents souch as antibiotics. Also, the linear polyol is not essential for the plant, once selection has been made. The linear polyol has a main chain of 5-8, preferably 6, carbon atoms and is selected from sorbitol, dulcitol, galactitol, (myo-)inositol, ribitol, or xylitol 211 257 317 331 377 391 437 451 497 New polyol transporter protein from plants, for selecting transformed cells and for imparting pathogen and salt-stress resistance to plants. 318 aaradgagrirchagredgaarerraaacareracheerecherredgererredgagered GIICGCCIICGCCCAICCICGCCICCAIGCCICCAICCICCICCICGGCIACGAIAI erinectrinactricica acridectricia reservate e introcura de la compania del compania del compania de la compania del compania del compania de la compania del compania d CGGGGTGATGAGCGGGGCGTCGCTGTACATCAAGAAGGACTTCAACATCAGTGACGGGAA regacitaticacidecaaraarciacercaaagaagacigecacarragigacacaca GGTGGAGGTTCTCATGGGCATACTGAACCTCTACTCGCTCATCGGCTCCTTCGCGGCGGG rdaactrocaaridgardgacdacdracaccardgrarragcragcaarcrorr CGCGGGGGGGGTTCCTCATGGGGTTCGCCGTCAACTACGCCATGCTCATGTTCGGCCGCTT cerrececeaciacircarecerrirececacaaciaecarirereareciarecerrir CGTGGCCGGCCATCGGCGTGCGCTACGCGCTCATGATCGCGCCGGTGTACACCGCGAGGT reraacaddaaraddrerredrirardcacrrardarcecaccrerracacrecadaddr Gaps polyol transporter; carbon source; plant; stress; sorbitol; dulcitol; galactitol; Э, DB 6; Length 2056; Sequence 2056 BP; 570 A; 374 C; 444 G; 667 T; 0 U; 1 Other; Indels Nucleotide sequence of a linear polyol transporter. 23.7%; Score 477.2; DB 6; 59.2%; Pred. ```
The present sequence encodes a polypeptide which is a transporter of a linear polyol. DNA encoding linear polyols is used to produce a selection system for transformed cells, based on the use of polyols as the only carbon source. It is also used to produce transgenic plants with increased resistance to pathogens and salt stress. The use of a linear polyol for selection eliminates the need for toxic selection reagents such as antibiotics. Also, the linear polyol is not essential for the plant, once selection has been made. The linear polyol has a main chain of 5.8, preferably 6, carbon atoms and is selected from sorbitol, dulcitol, galactitol, (myo-)inositol, ribitol, or xylitol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               272 GGIGGAGGIICICAIGGGCAIACIGAACCICIACICGCICAICGGCICCTICGCGGGGGG 331

DNA encoding linear polyols is used to produce a selection system for transformed calls, based on the use of polyols as the only carbon source. It is also used to produce transgenic plants with increased resistance to pathogens and salt stress. The use of a linear polyol for selection eliminates the need for toxic selection reagents solven as antibiotics. Also, the linear polyol is not essential for the plant, once selection has been made. The linear polyol has a main chain of 5-8, preferably 6, carbon access and is selected from sorbitol, dulcitol, galactitol, (myo-)inositol, ribitol, or xylitol

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid arrepresentative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased colerance to ablocic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ1219-6-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to berwent by the European Patent Office

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                           Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      783
